Software Developer 2 – Technical Challenge

Create a React web app that consumes the Open Weather API service (you'll need to create a free account to get an API key) <https://openweathermap.org/current>

Your application should allow the user to enter/select a city and display it's current weather report in Celsius.

Provide us a link to the source code on Github/Gitlab for review.

Things we're looking for:

- Working application.
- Clean, modern React code demonstrating best practices.
- Good commit practice.
- Appealing experience.

Stretch goals (optional):

- Automated deployment.
- A small backend, e.g. Express server, to store some form of user data.
